

ABSTRACT OF THE INVENTION

The present invention is to provide a method of without application installation comprising installing an application in a memory device (e.g., portable disk) in advance, connecting the memory device to an electronic device (e.g., personal computer) prior to use, automatically copying the application as a linked shortcut in an OS of the electronic device, showing an icon of the shortcut on a screen of the electronic device, and clicking the icon for opening the application, thereby enabling the electronic device to run the application without installing the same in a hard disk of the electronic device.
